

# INTRODUCTION TO PROMPTING

# PROMPT TEMPLATES

- A **Prompt Template** is a **predefined structure or format** for creating prompts that you send to a language model.
- It allows you to insert variables (**dynamic content**) into a prompt in a **consistent way**.
- This is especially useful when you're building applications (like chatbots or AI agents) that need to generate different prompts based on user input or context.

# PROMPTING STYLE

There are several prompting styles (or techniques) used to guide language models like in producing better, more accurate, and more task-aligned outputs.

1. Zero-Shot Prompting
2. One-Shot Prompting
3. Few-Shot Prompting
4. Chain-of-Thought Prompting (CoT)
5. Instruction-Based Prompting

# THANK YOU FOR YOUR ATTENTION

As we move forward, let's embrace AI as a partner in innovation, enhancing our abilities while maintaining the values that make us uniquely human.
